

ANDREJ JOVANOVSKI

SOFTWARE ENGINEER

Skopje, North Macedonia | andrejjojanovski001@gmail.com | www.andrejjojanovski.dev | +38978261825

SUMMARY

Software engineer with experience building scalable web applications, REST APIs, administrative dashboards, and network management systems. Skilled in PHP, Laravel, C#, .NET, TypeScript, SQL, and Elasticsearch. Experienced across the full development lifecycle, including backend architecture, responsive interfaces, database optimization, system integrations, code reviews, and production troubleshooting. Combining strong software development expertise with a solid background in networking and system administration.

TECHNICAL SKILLS

Backend: PHP, Laravel, C#, .NET, ASP.NET Core, Web API, EF Core, REST APIs, Dependency Injection
Frontend: TypeScript, React, Angular, Next.js, Vue.js
Databases & Search: SQL, PostgreSQL, Elasticsearch
Tools & Practices: Git, GitHub, Agile/Scrum, Code Reviews, CI/CD
Languages: Macedonian — Native; English — Professional proficiency

PROFESSIONAL EXPERIENCE

Software Engineer, Involve Development

Jun 2025 - Present

- Build and maintain backend APIs and business logic with Laravel/PHP, supporting reliable integration between frontend and backend systems.
- Implement Elasticsearch-powered search across large datasets and write optimized PostgreSQL queries for complex relational data.
- Develop responsive React interfaces with a focus on usability, maintainability, and performance.

Software Engineer, RevelApps (Contract)

- Breathe.mk**

Jul 2024 - Nov 2024

 - Contributing to the development of the Breathe.mk web application, aimed at tracking, reporting, and managing air pollution levels.
- Velnes.mk**

Dec 2025 - Mar 2026

 - Developed a multi tenancy web application with proper admin dashboards for managing beauty services in Macedonia. Resulting in 15% higher rate of reservation accross multiple saloons.
- Reservation system**

Maj 2026 - Sep 2026

 - Led development of an advanced reservation management system for restauraunts and hotels
 - Integration with already existing casa software

Web Developer, Multimedia-NET

Jan 2022 - May 2025

- End-to-End NMS Development: Engineered a comprehensive Network Management System (NMS) to monitor health, status, and performance of enterprise network infrastructure.
- Network Mapping & GIS: Developed interactive geospatial modules to visualize network topology and coverage areas, allowing operators to pinpoint physical device locations and coverage gaps.
- Device Communication: Implemented backend services to poll multi-vendor network devices (using SNMP, CLI/SSH, NETCONF) to extract critical telemetry data.
- CMS & Inventory: Designed a custom Content Management System (CMS) for managing network inventory assets, configuration templates, and operational documentation.

System Network Administrator, Multimedia-NET

Jun 2019 - Dec 2021

- Managing, maintaining and troubleshooting network equipment, servers, routes and switches.
- Overseeing and supervising daily operations of fiber optic technicians and project execution.

EDUCATION

Full Stack Web Development

Oct 2023 - Nov 2024

Brainster Academy

- Certified Full Stack Web Developer
- April's 2024 Dream Team Student

Bachelor of Computer Science

Oct 2020 - Mar 2024

ISU - "ST. NICHLOAS"

- Major in Computer Science and Networking

PROJECTS

- COKOLEND: Designed and developed web platform for taking and delivering orders(cakes), for company Cokolend (12/2024)
- CUSTOM ERP: Architected a centralized digital ecosystem to replace manual and paperless record-keeping, resulting in a 40% reduction in administrative overhead. Client: KUD Srpski Vez (10/2025)
- menucup.com — Digital Menu SaaS Platform: Designed and developed a SaaS platform that enables hospitality businesses to create customizable digital menus accessible through QR codes, with menu management, themes, analytics, and AI-powered recommendations. Technologies: Node, NextJs, React, PostgreSQL. Website: menucup.com
- Kumanovo Transit — Public Transport Web Platform: Designed and developed a mobile-first platform that helps passengers explore Kumanovo bus lines, stops, routes, and timetables through a clear and accessible interface. Technologies: React, TypeScript, Tailwind CSS, Maps APIs. Website: kumanovotranzit.com
